

CP1H Programmable Controller

High-Speed Micro PLC Offers Powerful Position Control and Communications Capability

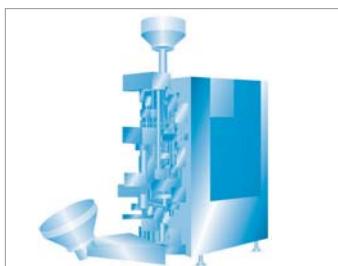

- Position control models have pulse outputs for 4 axes of servo motion control
- Built-in analog I/O models (4 inputs/2 outputs) integrate process data with sequential control
- Multi-axis counter inputs (up to 4) enable calculations for inverter positioning and drive chain control
- Expand the CP1H system using CPM1A expansion I/O units and CJ1 Special I/O modules
- One software (CX-One) and one connection point allows all Omron devices connected to CP1H via Ethernet, DeviceNet, Serial or MECHATROLINK-II to be configured, programmed and monitored
- CX-Programmer Jr. software, economical package for simple ladder diagram programming
- Built-in USB and peripheral ports and two sockets for serial communications boards simplify direct connection to serial devices and programming tools
- Network communication capabilities: Serial, Profibus-DP, DeviceNet and Omron's CompoBus/S Simplified connection for inverter speed control uses Modbus-RTU Easy Master.
