

### Typical Applications

- 3V CDMA/AMPS Cellular Handset
- 3V CDMA20001/X Cellular Handset
- Spread-Spectrum System

### Product Description

The RF6100-1 is a high-power, high-efficiency linear amplifier module specifically designed for 3V handheld systems. The device is manufactured on an advanced third generation GaAs HBT process, and was designed for use as the final RF amplifier in 3V IS-95/CDMA 2000 1X/AMPS handheld digital cellular equipment, spread-spectrum systems, and other applications in the 824MHz to 849MHz band. The RF6100-1 has a digital control line for low power applications to lower quiescent current. The device is self-contained with 50Ω input and output that is matched to obtain optimum power, efficiency and linearity. The module is a 4mmx4mm land grid array with back-side ground. The RF6100-1 is footprint compatible with industry standard 4mmx4mm CDMA modules, and requires only one decoupling capacitor.

### Package Style: Module (4mmx4mm)

### Features

- Input/Output Internally Matched @ 50Ω
- 28dBm Linear Output Power
- 40% Peak Linear Efficiency
- -50dBc ACPR @ 885 kHz
- 29dB Linear Gain
- 53% AMPS Efficiency

Pin	Function	Description	Interface Schematic
1	VREG	Regulated voltage supply for amplifier bias. In Power Down mode, both $V_{REG}$ and $V_{MODE}$ need to be LOW (<0.5V).	
2	VMODE	For nominal operation (High Power Mode), $V_{MODE}$ is set LOW. When set HIGH, devices are biased lower to improve efficiency.	
3	GND	Ground connection. Connect to package base ground. For best performance, keep traces physically short and connect immediately to ground plane.	
4	RF IN	RF input internally matched to 50 $\Omega$ . This input is internally AC-coupled.	
5	VCC1	First stage collector supply. A low frequency decoupling capacitor (e.g., 4.7 $\mu$ F) may be required.	
6	VCC2	Output stage collector supply. A low frequency decoupling capacitor (e.g., 4.7 $\mu$ F) is required.	
7	GND	Ground connection. Connect to package base ground. For best performance, keep traces physically short and connect immediately to ground plane.	
8	RF OUT	RF output internally matched to 50 $\Omega$ . This output is internally AC-coupled.	
9	GND	Ground connection. Connect to package base ground. For best performance, keep traces physically short and connect immediately to ground plane.	
10	GND	Ground connection. Connect to package base ground. For best performance, keep traces physically short and connect immediately to ground plane.	
Pkg Base	GND	Ground connection. The backside of the package should be soldered to a top side ground pad which is connected to the ground plane with multiple vias. The pad should have a short thermal path to the ground plane.

## PCB Design Requirements

### PCB Surface Finish

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3μinch to 8μinch gold over 180μinch nickel.

### PCB Land Pattern Recommendation

PCB land patterns are based on IPC-SM-782 standards when possible. The pad pattern shown has been developed and tested for optimized assembly at RFMD; however, it may require some modifications to address company specific assembly processes. The PCB land pattern has been developed to accommodate lead and package tolerances.

### PCB Metal Land and Solder Mask Pattern

**Figure 1. PCB Metal Land and Solder Mask Pattern (Top View)**

### Thermal Pad and Via Design

The PCB metal land pattern has been designed with a thermal pad that matches the exposed die paddle size on the bottom of the device.

Thermal vias are required in the PCB layout to effectively conduct heat away from the package. The via pattern has been designed to address thermal, power dissipation and electrical requirements of the device as well as accommodating routing strategies.

The via pattern used for the RFMD qualification is based on thru-hole vias with 0.203mm to 0.330mm finished hole size on a 0.5mm to 1.2mm grid pattern with 0.025mm plating on via walls. If micro vias are used in a design, it is suggested that the quantity of vias be increased by a 4:1 ratio to achieve similar results.
